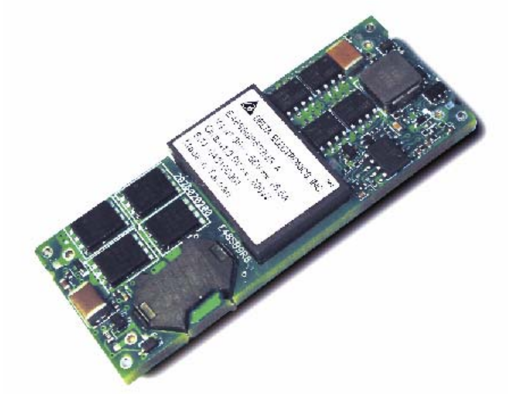
DELPHI SERIES



FEATURES

- Input voltage range: 38V~55V
- Output 240W @ 44Vin and above
- Output 22.3A @ 44Vin and below
- High efficiency: 96.3% @ 12V/20A
- Size: 58.4mm x 22.8mm x 11.4mm (2.28" x 0.90" x 0.45")
- Industry standard pinout
- Fully protected: Input UVLO, OVP, Output OCP and OTP
- Parallelable for higher output power
- 2250V isolation
- Basic insulation
- Monotonic startup
- No minimum load required
- ISO 9001, TL 9000, ISO 14001, QS9000, OHSAS18001 certified manufacturing facility
- UL/cUL 60950 (US & Canada) Recognized, and TUV (EN60950) Certified
- CE mark meets 73/23/EEC and 93/68/EEC directives

Delphi Series E48SB, 240W Eighth Brick Bus Converter DC/DC Power Modules: 48Vin, 12V/20A out

Delta Electronics, Inc., a world leader in power systems technology and manufacturing, has introduced the E48SB, eighth brick sized 240W bus converter, into their Delphi Series of board mounted DC/DC power converters to support the intermediate bus architecture to power multiple downstream non-isolated point-of-load (POL) converters. The E48SB product family features an input voltage of 38V to 55V, and provides up to 240W (9.6V and above) of power in an industry standard eighth brick footprint. Typical efficiency of 12V module is 96.3%. With optimized component placement, creative design topology, and numerous patented technologies, the E48SB bus converters deliver outstanding electrical and thermal performance. An optional heatsink is available for harsh thermal requirements.

OPTIONS

- Positive On/Off logic
- Short pin lengths
- Heatsink available for extended operation
- OTP and OCP mode (Auto restart or latch)

APPLICATIONS

- Datacom / Netowrking
- Wireless Networks
- Optical Network Equipment
- Server and Data Storage
- Industrial / Testing Equipment

Delta Electronics, Inc.

TECHNICAL SPECIFICATIONS

(T_A=25°C, airflow rate=300 LFM, V_{in}=48Vdc, nominal Vout unless otherwise noted.)

PARAMETER	NOTES and CONDITIONS	E48SB12020 (Standard)			
		Min.	Typ.	Max.	Units
ABSOLUTE MAXIMUM RATINGS					
Input Voltage					
Continuous				60	Vdc
Operating Temperature	Refer to Figure 18 for the measuring point	-40		128	°C
Storage Temperature		-55		125	°C
Input/Output Isolation Voltage				2250	Vdc
INPUT CHARACTERISTICS					
Operating Input Voltage		38	48	55	Vdc
Input Under-Voltage Lockout					
Turn-On Voltage Threshold		35	36	37	Vdc
Turn-Off Voltage Threshold		33	34	35	Vdc
Lockout Hysteresis Voltage		1	2	3	Vdc
Input Over-Voltage Lockout					
Turn-Off Voltage Threshold		57.5	58.5	59.7	Vdc
Turn-On Voltage Threshold		55.5	56.5	57.5	Vdc
Lockout Hysteresis Voltage		1	2	3	Vdc
Maximum Input Current	100% Load, 44V Vin			5.68	A
No-Load Input Current			85	100	mA
Off Converter Input Current			10	11	mA
Inrush Current (I^2t)				0.02	A^2s
Input Reflected-Ripple Current	P-P thru 12μH inductor, 5Hz to 20MHz		10	20	mA
OUTPUT CHARACTERISTICS					
Output Voltage Set Point	Vin=48V, Io=no load, Ta=25°C		11.85		Vdc
Output Voltage Regulation					
Over Load	Io=Io,min to Io,max		300	400	mV
Over Line	Vin=38V to 55V		4.3	4.5	V
Over Temperature	Tc=-40°C to 105°C			250	mV
Total Output Voltage Range	over sample load, line and temperature	8.9		13.75	V
Output Voltage Ripple and Noise	5Hz to 20MHz bandwidth				
Peak-to-Peak	Full Load, 1μF ceramic, 10μF tantalum		80	100	mV
RMS	Full Load, 1μF ceramic, 10μF tantalum		25	40	mV
Operating Output Power Range	Output current range when Vin below 44V	0		22.3	A
	Output power range when Vin=44V and above	0		240	W
Output Current Protection	Vin=38V to 55V	110		130	%
Current share accuracy (2 units in parallel)	% of rated output current		10		%
DYNAMIC CHARACTERISTICS					
Output Voltage Current Transient	48V, 10μF Tan & 1μF Ceramic load cap, 0.1A/μs				
Positive Step Change in Output Current	50% Io.max to 75% Io.max		0		mV
Negative Step Change in Output Current	75% Io.max to 50% Io.max		0		mV
Settling Time (Vo deviation recover to 10% of max deviation)			0		us
Turn-On Transient					
Start-Up Time, From On/Off Control	100% Load	10		16	ms
Start-Up Time, From Input	100% Load	16		28	ms
Maximum Output Capacitance				3000	μF
EFFICIENCY					
100% Load			96.3		%
60% Load			95.8		%
ISOLATION CHARACTERISTICS					
Input to Output				2250	Vdc
Isolation Resistance		10			MΩ
Isolation Capacitance			1000		pF
FEATURE CHARACTERISTICS					
Switching Frequency			190		kHz
ON/OFF Control, Negative Remote On/Off logic					
Logic Low (Module On)	Von/off	-0.7		0.8	V
Logic High (Module Off)	Von/off	2		18	V
ON/OFF Control, Positive Remote On/Off logic					
Logic Low (Module Off)	Von/off	-0.7		0.8	V
Logic High (Module On)	Von/off	2		18	V
ON/OFF Current (for both remote on/off logic)	Ion/off at Von/off=0.0V		0.25	0.3	mA
Leakage Current (for both remote on/off logic)	Logic High, Von/off=15V			30	uA
GENERAL SPECIFICATIONS					
MTBF	Io=80% of Io, max;		2.01		M hours
Weight			31.76		grams
Over-Temperature Shutdown	Refer to Figure 18 for the measuring point		130		°C

DESIGN CONSIDERATIONS

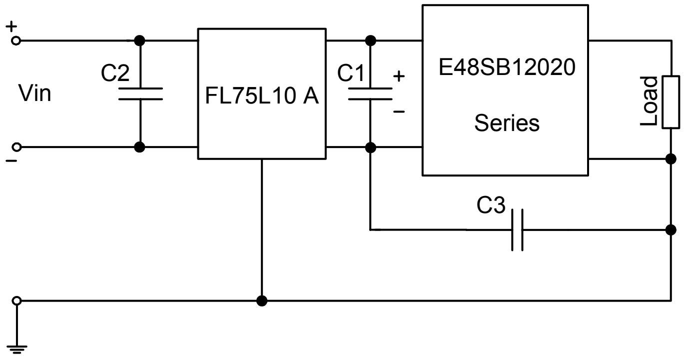
Input Source Impedance

The impedance of the input source connecting to the DC/DC power modules will interact with the modules and affect the stability. A low ac-impedance input source is recommended. If the source inductance is more than a few µH, we advise adding a 33 to 220µF electrolytic capacitor (ESR < 0.5 Ω at 100 kHz) mounted close to the input of the module to improve the stability.

Layout and EMC Considerations

Delta's DC/DC power modules are designed to operate in a wide variety of systems and applications. For design assistance with EMC compliance and related PWB layout issues, please contact Delta's technical support team. An external input filter module is available for easier EMC compliance design. Below is the example of using Delta latest FL75L10 A input filter tested with E48SB12020 to meet class B in CISSPR 22.

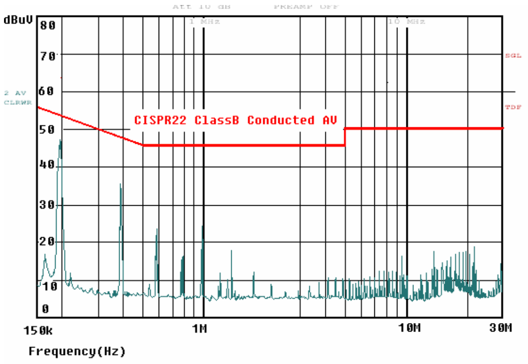
Schematic and Components List



C1 is 100uF/100V, low ESR Aluminum cap;
C2 is 2.2uF ceramic cap;
C3 is 4.7nF ceramic capacitor;
FL75L10 A is Delta input EMI filter module.

Test Result

Test result is in compliance with CISPR 22 class B, which is shown as below:



Vin=48V, Io=20A, average mode

Soldering and Cleaning Considerations

Post solder cleaning is usually the final board assembly process before the board or system undergoes electrical testing. Inadequate cleaning and/or drying may lower the reliability of a power module and severely affect the finished circuit board assembly test. Adequate cleaning and/or drying is especially important for un-encapsulated and/or open frame type power modules. For assistance on appropriate soldering and cleaning procedures, please contact Delta's technical support team.

FEATURES DESCRIPTIONS

Over-Current Protection

The modules include an internal output over-current protection circuit, which will endure current limiting for an unlimited duration during output overload. If the output current exceeds the OCP set point, the modules will automatically shut down, and enter in hiccup mode or latch mode, which is optional.

For hiccup mode, the module will try to restart after shutdown. If the overload condition still exists, the module will shut down again. This restart trial will continue until the overload condition is corrected.

For latch mode, the module will latch off once it shutdown. The latch is reset by either cycling the input power or by toggling the on/off signal for one second.

Download from Www.Somanuals.com. All Manuals Search And Download.

Over-Temperature Protection

The over-temperature protection consists of circuitry that provides protection from thermal damage. If the temperature exceeds the over-temperature threshold, the module will be shut down, and enter in the auto-restart mode or latch mode, which is optional.

For auto-restart mode, the module will monitor the module temperature after shutdown. Once the temperature of module is decreased by an OTP hystersis that is about 30°C, the module will auto-restart.

For latch mode, the module will latch off once it shutdown. Either cycling the input power or toggling the on/off signal for one second can reset the latch.

Remote On/Off

The remote on/off feature on the module can be either negative or positive logic. Negative logic turns the module on during logic low and off during logic high. Positive logic turns the modules on during logic high and off during logic low.

Remote on/off can be controlled by an external switch between the on/off terminal and the Vi(-) terminal. The switch can be an open collector or open drain.

For negative logic if the remote on/off feature is not used, please short the on/off pin to Vi(-). For positive logic if the remote on/off feature is not used, please leave the on/off pin floating.

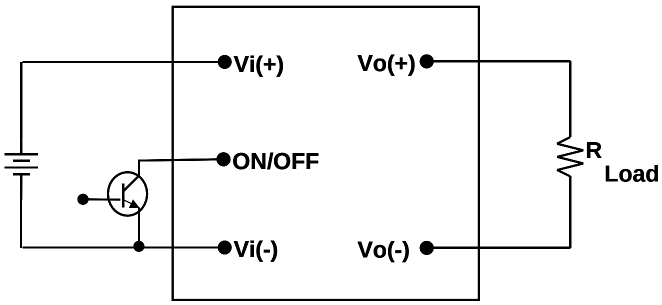


Figure 16: *Remote on/off implementation*

Current Sharing

The modules are designed to operate in parallel without the use of any external current share circuitry. For design assistance with Parallel and related PWB layout issues, please contact Delta's technical support team.

THERMAL CONSIDERATIONS

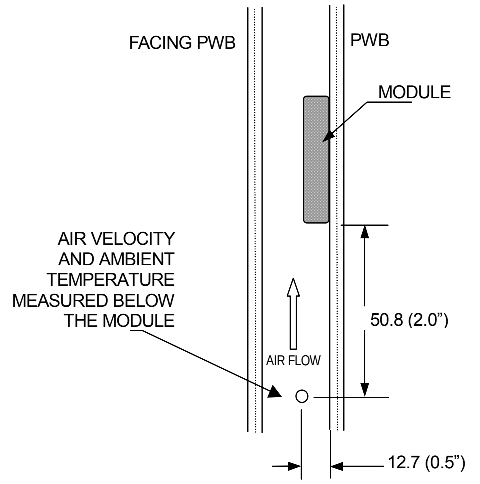
Thermal management is an important part of the system design. To ensure proper, reliable operation, sufficient cooling of the power module is needed over the entire temperature range of the module. Convection cooling is usually the dominant mode of heat transfer.

Hence, the choice of equipment to characterize the thermal performance of the power module is a wind tunnel.

Thermal Testing Setup

Delta's DC/DC power modules are characterized in heated vertical wind tunnels that simulate the thermal environments encountered in most electronics equipment. This type of equipment commonly uses vertically mounted circuit cards in cabinet racks in which the power modules are mounted.

The following figure shows the wind tunnel characterization setup. The power module is mounted on a test PWB and is vertically positioned within the wind tunnel. The space between the neighboring PWB and the top of the power module is constantly kept at 6.35mm (0.25'').



Note: Wind Tunnel Test Setup Figure Dimensions are in millimeters and (Inches)

Figure 17: *Wind tunnel test setup*

Thermal Derating

Heat can be removed by increasing airflow over the module. To enhance system reliability, the power module should always be operated below the maximum operating temperature. If the temperature exceeds the maximum module temperature, reliability of the unit may be affected.

THERMAL CURVES

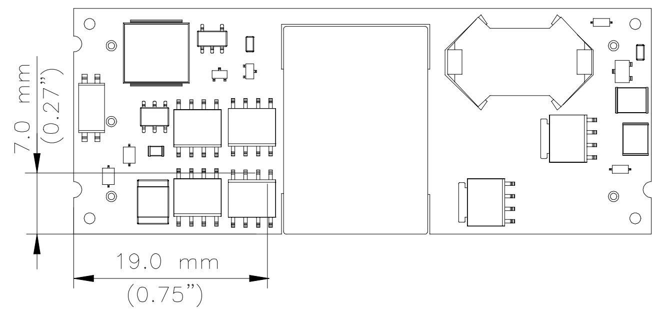


Figure 18: *Temperature measurement location*
The allowed maximum hot spot temperature is defined at 128℃

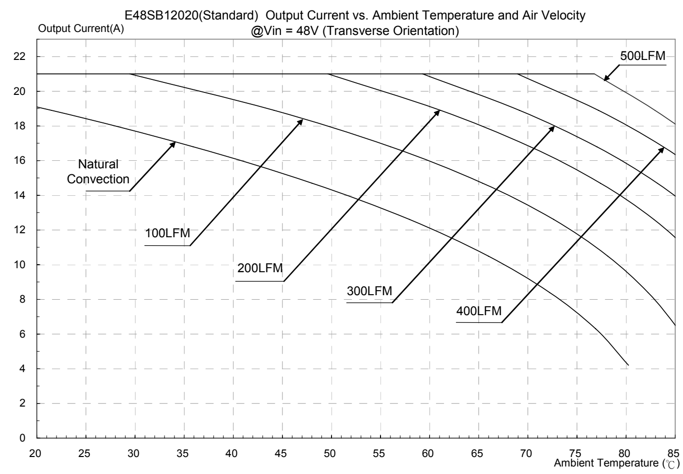

Figure 19: *Output current vs. ambient temperature and air velocity@Vin=48V (Transverse Orientation)*

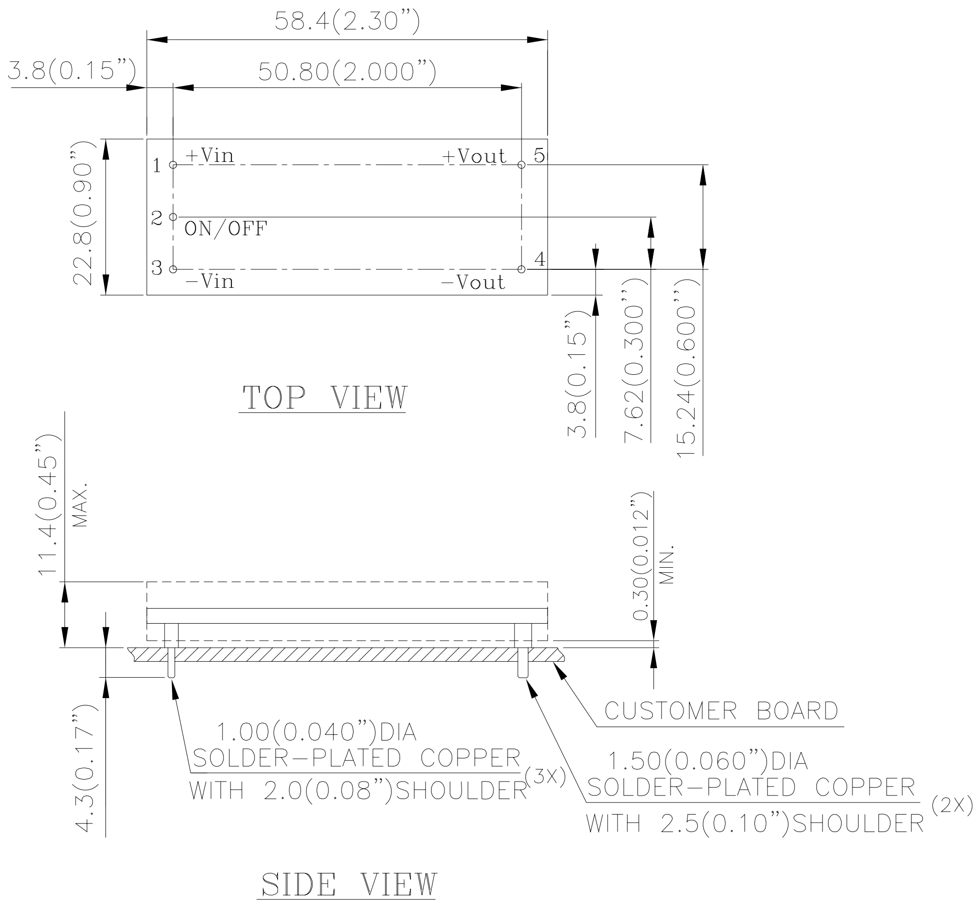
MECHANICAL DRAWING



NOTES:
DIMENSIONS ARE IN MILLIMETERS AND (INCHES)
TOLERANCES: X.Xmm±0.5mm(X.XX in.±0.02 in.)
X.XXmm±0.25mm(X.XXX in.±0.010 in.)

Pin No.	Name	Function
1	+Vin	Positive input voltage
2	ON/OFF	Remote ON/OFF
3	-Vin	Negative input voltage
4	-Vout	Negative output voltage
5	+Vout	Positive output voltage

Pin Specification:

Pins 1-3 1.0mm (0.040") diameter

Pins 4-5 1.5mm (0.060") diameter

All pins are copper with Tin plating (Pb free)
